Dear Exhibitors, Delegates and Visitors,

Welcome to SmartCards Expo 2013 and its co-located events: e-Security Expo 2013, RFidIndia Expo 2013, BiometricsIndia Expo 2013, e-PaymentsIndia Expo 2013 and IndiaMobileForum 2013.

We take pleasure in presenting the 15th Edition of SmartCards Expo, the No. 1 Smart Card Exposition in Asia and No.2 in the World alongwith its co-located events.

India has seen promising growth of Smart Card Technology applications during recent years. Starting on a humble note with Pilot Projects in the 1990s and passing through a phase of mini projects, Smart Card applications in India have now proliferated into multiple large projects. Apart from SIM card for Mobile phones, introduced in 1995, the government of India has launched a number of large socio-economic and e-Governance projects based on smart card in recent years.

These include: Driving Licence and Vehicle Registration, which was the first government initiated smart card project in India, announced in 2001, Rashtriya Swasthya Bima Yojana (RSBY), Public Distribution System (PDS), Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA), Direct Cash Transfer for food subsidy project, Metro Rail applications, Ex-Servicemen Contributory Health Scheme, to name a few.

Major projects like Population Register/National ID card, approved in principal by the Government of India and in the limelight for over a decade, if and when implemented on a full scale, would be the largest project on Earth. Projects like Voter ID Card, PAN Card, initiated, funded and implemented by the Central Government but currently not on Smart cards, can also be integrated on a smart card. There are a number of smart card based Financial and Banking applications being introduced with full support from the Reserve Bank of India.

A number of projects based on RFID and Biometrics technologies like Unique Identification, Tolling, Automotive applications, Vehicle Number plates and many others introduced recently. India has emerged as the largest biometric using country.

Electronics Today, India's FIRST Techno-Economics Electronics monthly journal, launched in 1968, has spearheaded Smart Card Revolution in India since 1997, when it organised for the first time in India an International Conference on Smart Card Technology and its Applications. SmartCards Expo, launched in 1999, has further accelerated the spread of Smart Card applications.

About 175 exhibitors from 20 countries are exhibiting their products and solutions in SmartCards Expo 2013, co-located with e-Security Expo 2013, RFidIndia Expo 2013, BiometricsIndia Expo 2013, e-PaymentsIndia Expo 2013 and India Mobile Forum 2013. SmartCards Expo 2013 is having special Focus on Smart Card technology and applications. The following two International Conferences are being organised during the show:

— International Conference on Smart Card Manufacturing in India - Prospects and Challenges, on October 17, 2013, and

— International Conference on Multi-applications ID Card - Opportunities and Challenges, on October 18, 2013.

Mr. J. Satyanarayana, Secretary, Department of Electronics and Information Technology, Government of India, has kindly consented to Inaugurate the International Conference on Smart Card Manufacturing in India - Prospects and Challenges, on October 17, 2013. He will also formally Inaugurate the Exhibition,

Mr. Anil Swarup, Addl. Secretary, Cabinet Secretariat, has kindly agreed to Inaugurate International Conference on Multi-applications ID Card - Opportunities and Challenges, on October 18, 2013.

We are indeed thankful to both of them for accepting our invitation.

Organised by Electronics Today, India's FIRST Techno-Economic Monthly Journal, SmartCards Expo 2013, with its co-located events is Sponsored by the Department of Electronics and Information Technology, Government of India, and co-sponsored by Mobile Payment Forum of India (MPFI), Cellular Operators Association of India (COAI); AIDC Technologies Association of India (AIDC); The Institution of Electronics and Telecommunication Engineers (IETE); Consumer Electronics and Appliances Manufacturers Association (CEAMA); Association of Unified Telecom Service Providers of India (AUSPI); Telecom Equipment Manufacturers Association of India (TEMA); Communications and Manufacturing Association of India (CMAI); DECT Forum India; IPTV India Forum (IPTV); Telecom Users Group of India (TUGI); ITU-Apt Foundation of India; Smart Card Alliance (USA); Advanced Card Technology Association of Canada (ACT Canada); Asia Pacific Smart Card Association (APSCA); Shanghai, Smart Card Federation of China (SCFC); GlobalPlatform; Eurosmart (Brussels), and Hologram Manufacturers Association of India (HOMAI).

Our Thanks

We thank our industry partners, who have made the show more attractive and impressive. They include: Kyros Soft Tech Limited (Bronze Sponsorship), AdvanIde (Walk the Talk) Fime India (Conference Pens). HID (Direction Boards). We are indeed grateful to all our other supporters: industry associations, Exhibitors, Speakers in the Conferences, delegates and last but not least our staff members, who have put hard work to make this event a success.

Department of Electronics and Information Technology

Mission

e-Development of India through multi pronged strategy of e-Infrastructure creation to facilitate and promote e-governance, promotion of Electronics & Information Technology - Information Technology Enabled Services (IT-ITeS) Industry, providing support for creation of Innovation / Research & Development (R&D), building Knowledge network and securing India's cyber space.

Objective

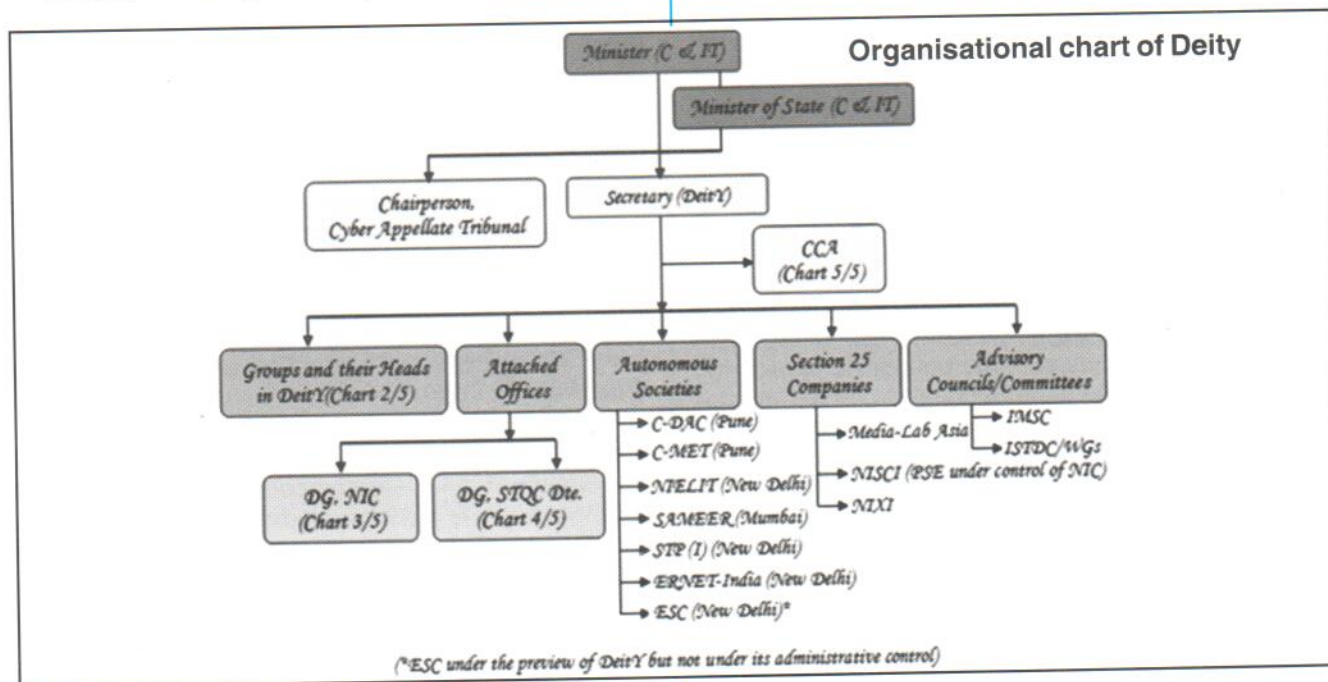

- e-Government: Providing e-infrastructure for delivery of e-services.
- e-Industry: Promotion of electronics hardware manufacturing and IT-ITeS industry.
- e-Innovation / R & D: Providing Support for creation of Innovation Infrastructure in emerging areas of technology.
- e-Education: Providing support for development of e-Skills and Knowledge network.
- e-Security: Securing India's cyber space.

Allocation of Business Rules

- Policy matters relating to Information Technology, Electronics and Internet.
- Initiatives for development of Hardware / Software industry including knowledge based enterprises,

measures for promoting Information Technology exports and competitiveness of the industry.

- Promotion of Information Technology and Information Technology enabled services and Internet.
- Assistance to other departments in the promotion of E-Governance, E-Infrastructure, E-Medicine, E-Commerce, etc.
- Promotion of Information Technology education and Information Technology-based education.
- Matters relating to Cyber Laws, administration of the Information Technology Act. 2000 (21 of 2000) and other Information Technology related laws.
- Matters relating to promotion and manufacturing of Semiconductor Devices in the country.
- Interaction in Information Technology related matters with International agencies and bodies.
- Initiative on bridging the Digital Divide, Matters relating to Media Lab Asia.
- Promotion of Standardization, Testing and Quality in Information Technology and standardization of procedure for Information Technology application and Tasks.
- Electronics Export and Computer Software Promotion Council (ESC).
- National Informatics Centre (NIC)
- All matters relating to personnel under the control of the Department

Advanced Card Technology Association of Canada - ACT Canada

ACT Canada is a non-profit association, federally incorporated in 1989. As an educator, enabler, influencer and advocate for members, ACT Canada is the internationally-recognized authority, trusted knowledge resource and catalyst for change in payments and secure identity. We build bridges and break down barriers to support our members in their quest for competitive advantage in the payments, authentication and identity management space. We are the go-to resource for issuers, acquirers, merchants, regulators, brands, networks, governments, technology providers, integrators, industry associations, security specialists, gateways, processors, integrators, loyalty companies, transit systems, secure identity solution providers and many other stakeholders.

With a 23 year history in the Canadian market, ACT Canada is able to provide unique insights to its members. Its work with various stakeholders and international associations provides a broad perspective of this industry. The association provides a neutral forum for stakeholders to meet and discuss issues. Its networking events bring together key players and provide an entry point for new comers to its market. Global network of the association provides information and contacts from around the world.

Members of the association receive enhanced exposure in the newsletter and Directory brought out by the association. The Directory provides buyers with information about the members' products and services. Members are provided with unique speaking opportunities and the ability to participate in Strategic Leadership Teams.

ACT Canada is a founding member of ISCAN www.iscan.ca, the International Smart Card Associations Network.

CO-SPONSORS

AIDC Technologies Association of India

AIDC Technologies Association of India is an Association for Automatic Identification and Mobility. This covers the following six groups of technologies and services.

1. Bar Code Technology
2. Radio Frequency Identification Devices (RFID)
3. Mobile Computing Data Communication
4. Electronic Article Surveillance (EAS)
5. Real Time Locating Systems (RTLS)
6. Smart Card Technology, Biometrics and Voice Recognition Technologies to improve business efficiencies and competitiveness

The Aim industry that includes Barcodes, RFID, EAS, Smart Cards & Biometrics are probably the fastest growing segments of the economy anywhere in the world. Though the base is still small in our country, the over 40 percent growth that is taking place year on year is increasingly becoming significant. The incremental growth is large enough already to catch the eyes of the largest global players. The factors that drive the domestic requirements all indicate that the demand itself will ensure the present rate of growth in the years to come. If the Indian industry can leverage its IT strengths and grab the opportunities that are coming its way, it is not inconceivable that India can be a major hub to provide the software, integrated solutions and finished products in these fields to the entire world.

Asia Pacific Smart Card Association - APSCA

The Asia Pacific Smart Card Association (APSCA) is a non-profit, independent association for organisations in the smart card industry in the Asia Pacific region. APSCA is the only professional association for smart cards covering the Asia Pacific and has over 60 members in Hong Kong, China, Taiwan, Japan, Korea, Singapore, Malaysia and Thailand.

The Association delivers information, consultancy, guidance and networking to corporations and government organisations, including smart card scheme operators and suppliers, providing an unparalleled opportunity to solve problems, facilitate smart card initiatives and generate increased business development. Apart from organising more than 50 events, seminars, trainings and conferences covering all aspects of smart cards, APSCA has assisted government smart card projects, national card payment policies and initiated real business for APSCA members.

The Asia Pacific Smart Card Association is part of the Smartex organisation (www.smartex.com), an international group of smart card forums around the world with offices and organisations in the United Kingdom, Europe, the Middle East, Africa and the Asia Pacific. Each of these organisations is a professional association of member companies and constitutes a forum for education, debate and promotion of all aspects of smart card and related technologies, standards, applications and schemes. The list of APSCA members is available on our Website. A list of the more than 500 members of all Smartex associations and forums shows that we are now collectively the largest smart card forum in the world.

APSCA and Smartex also have close communications with other major smart card industry associations around the world including the Smart Card Alliance in the USA, EuroSmart in Europe, JICSAP, ECSEC and the ICPC in Japan, the Korea Electronic Payment Forum in South Korea, and many others.

One of the major objectives of the Asia Pacific Smart Card Association is to provide opportunities and channels through which organisations and individuals in the smart card industry can meet, interact and form business relationships with each other. For this reason we think it's important that APSCA, like the rest of the Smartex forums, is not a purely supplier-led forum. Around 40% of members are users and scheme operators from the public and private sector. Around the world Smartex has over 500 members from all areas of business including banks, credit card companies, retailers, utility companies, trans-

port operators, government agencies, telecom providers, semiconductor manufacturers, smart card suppliers and software developers among many others.

Every year APSCA holds over 20 meetings and events around the Asia Pacific region. These events are highly respected and considered to provide the best networking opportunities in the Asian smart card industry.

Association of Unified Telecom Service Providers of India (AUSPI)

Association of Unified Telecom Service Providers of India (AUSPI) is the representative industry body of Unified Access Service Licensees providing CDMA and GSM Mobile Services, Fixed Line Services as well as Value Added Services throughout the length and breadth of the country. AUSPI is a registered society and works as a non-profit organization with the aim of Delivering the promise of improved Access, Coverage and Teledensity in India.

The objectives of the Association include collection and dissemination of knowledge and information for promotion and healthy growth of telecom services, enunciating a telecom vision for India, fueling unprecedented domestic investment, improving teledensity and bringing value for customers.

The Association interacts on policy and regulatory issues with various Government bodies such as the Department of Telecommunications, Telecom Regulatory Authority of India, apex industry organizations like ASSOCHAM, Confederation of Indian Industry (CII) and Federation of Indian Chambers of Commerce & Industry (FICCI), technical institutions, financial analysts and other institutions of world repute. The Association formulates expert opinion on industry issues and submits whenever necessary, recommendations to the concerned authorities.

Cellular Operators Association of India (COAI)

Cellular Operators Association of India (COAI) was constituted in 1995 as a registered, non-governmental society. The Association is dedicated to the advancement of modern communication through the establishment of a world-class cellular infrastructure and to delivering the benefits of affordable mobile communication services to the people of India. COAI core membership includes private cellular operators, namely - Aircel Ltd., Bharti Airtel Ltd., Etisalat Db Telecom India Pvt. Ltd., Idea Cellular, Loop Mobile (India) Ltd., S-Tel Ltd., Unitech Wireless Pvt. Ltd and Associated companies, Videocon Telecommunications Ltd. and Vodafone Essar operating across the whole country.

Also participating in COAI's activities to help realize the common goals of the Indian cellular industry, are our Associate Members - Ascend Telecom Infrastructure Pvt. Ltd., ATC Tower Company of India Pvt. Ltd., Ericsson Communications Ltd., Essar Telecom Infrastructure Pvt. Ltd., GTL Infrastructure Ltd., India Telecom Infra Ltd., Indus Tower Ltd., Nokia Siemens Networks, Quippo Telecom Infrastructure Ltd., Tower Vision India Pvt. Ltd., and Xcel Telecom.

Over the years COAI has emerged as the official voice for the Indian GSM Industry and interacts directly with Ministries, Policy Makers, Regulators, Financial Institutions and Technical Bodies. It provides a forum for discussion and exchange of ideas between these bodies and Service Providers, who share a common interest in the development of cellular mobile telephony. COAI also collaborates with other Industry Associations such as CII, FICCI, ASSOCHAM, AUSPI, ISPAI, VSAT association etc, with the objective of presenting an industry consensus view to the Government on crucial issues relating to the growth and development of the Indian Cellular Industry.

COAI also interacts with various international organizations such as ITU, GSMA, UMTS, WWRF and 3GPP etc. as well as the Press & Media to ensure that the issues pertaining to the cellular industry are discussed, understood and debated on a wider platform.

Communications and Manufacturing Association of India (CMAI)

Communications and Manufacturing Association of India (CMAI) is a non-profit trade promotion organization based in India with MOU partners and representatives spread across the globe. CMAI invests heavily in industry services, education and training, industry promotion, market researches etc.

CMAI is prominent trade association promoting growth in communications, manufacturing trade sector through Legislative and Regulatory Advocacy, Research, Exhibitions, Trade shows, Conferences and Seminars, Technology events, Buyer sellers meets, B2B meetings, promotion and fostering business and strategic relationships.

CMAI is the only trade organization bringing in focus harmony between manufacturing across all sectors including ICT, Communications and Environmental Management policies. CMAI assists in promotion of technology innovations, manufacturing and communications sector and for policies concerning environmental, pollution and health.

CMAI, a professional registered association, has become extremely pro-active, forward looking and effective catalyst between the Government, industry and the consumers at large. CMAI has been successful in influencing the Government in shaping India's economic, trade, fiscal and social policies which will be of benefit to the country as a whole and the trade and industry in particular. CMAI caters services to various constituents comprising multinational companies, top corporates, medium and small scale units representing and striving hard to create a conducive environment for the businesses to compete globally. It assists manufacturers to maximize competitiveness on the domestic and international markets.

CMAI' Core mission includes to assist trade, businesses and manufacturers in development of domestic and international markets; to collaborate with Government and industry to promote business, trade, manufacturing, communications; to provide consultations, advice guidance and information for business alliances, trade promotion; to develop an effective platform for attracting major buyers and sellers face to face in various trade shows and delegations, conferences and forming partnerships with various overseas organizations and enhancing a synergistic effect through convergence and related industries giving opportunities and access to members to the newest technologies and industry information

Consumer Electronics and Appliances Manufacturers Association (CEAMA)

Consumer Electronics and Appliances Manufacturers Association is an all India organization of the Consumer Electronics and Durables sector. It has been in existence for over 32 years. Presently, there are about 100 member companies engaged in the manufacture of Consumer Electronics and Home Appliances. The membership spectrum comprises of both Indian corporates and MNCs, and includes large, medium and small scale sectors.

CAEMA provides the following services:

- Interacts with the Government in formulating policies for the development of the sector.
- Facilitates industry growth by serving as an interface with the Government for meaningful interaction and dialogue.
- Provides consultancy on commercial matters.
- Conducts Training Programs / Workshops.
- Organizes Seminars, Conferences and Exhibitions.
- Maintains Data Bank for use by members.
- Interacts with other industry Chambers / Associations.

DECT Forum India

The main objectives of DECT Forum India are:

- i) To collect, disseminate and apprise public about Digital Enhanced Telecommunication System (DECT), CAT-Iq, and DECT WLL technologies.
- ii) To Promote and ensuring awareness of DECT, CAT Iq DECT WLL advantages and benefits to telecommunication users, operators, manufacturers and Regulators.
- iii) To support a collaborative environment of CAT-Iq industry and DECT industry

- iv) To formulate, arrange, organize programs for developing and improving DECT and/or CAT Iq and/or CAT WLL so as to meet the needs of a technology shifting world
- v) To provide a professional and responsive voice of the DECT, CAT-Iq and DECT WLL industry.
- vi) To liaison with the Govt. Regulatory bodies inter-alia, with a view to remove any bottle necks in the development of the industry.
- vii) To identify and encourage India specific solutions.
- viii) To convince the telecommunication regulators to grant and maintain spectrum for DECT, CAT Iq and DECT WLL standards and technology.
- ix) To work with spectrum allocation authority to harmonise the local spectrum to internationally accepted norms.
- xii) To act as a bureau of information for its members about DECT CAT-Iq, DECT WLL technologies and facilitate communication, coordination and mutual consultations amongst members.
- xiii) to arrange, organize, conduct, sponsor workshops, seminars, conferences, research papers and training for its members.

Mission and Vision

The Mission of the DECT Forum India is to support a collaborative environment of the DECT industry and drive programs to develop and improve DECT wireless technology in order to exceed wireless communications expectations and meet the needs of a technology-shifting world. Our main objectives are to collect, disseminate and apprise public about Digital Enhanced Telecommunication System (DECT), CAT-Iq, and DECT WLL technologies and to promote and ensuring awareness of DECT, CAT Iq DECT WLL advantages and benefits to telecommunication users.

EUROSMART

EUROSMART is an international not-for-profit association, located in Brussels, which represents the voice of the Smart Security Industry for multi-sector applications. Since its creation in 1995, Eurosmart has been committed to expanding the world's smart secure devices market, developing smart security standards and continuously improving quality and security applications. Smart Secure devices are smart objects which contain a secure IC and embedded software and support personalization by the issuer. The main purpose is to offer Human-to-Machine as well as Machine-to-Machine security services such as data integrity, user authentication or secure storage. It comes in multiple form factors, including Smart card and Smart USB token. This includes personal, portable as well as embedded devices.

The association principally gathers manufacturers of Smart cards and Smart Secure devices, Smart Secure devices integrated circuit manufacturers, terminals, equipment for smart cards system integrators, application developers and issuer. The association has enlarged its scope to welcome members from new horizons such as universities, educational institutions, government bodies, public labs, not-for-profit organisations, independent and industry experts. Members work within dedicated working groups on security, market analysis, new form factors, electronic identity and communication issues. As an association gathering members from the whole value chain, Eurosmart is the ideal forum to value the expertise of the Smart Security industry regarding security, especially privacy management.

The Activity Reports show the commitment of the association to promote the security expertise of the Smart Security Industry and take care of explaining the added-value of Smart Secure Objects in a digital world.

GlobalPlatform, Inc.

Our Mission

GlobalPlatform works across industries to identify develop and publish specifications which facilitate the secure and interoperable deployment and management of multiple embedded applications on secure chip technology. GlobalPlatform Specifications enable trusted end-to-end solutions which serve multiple actors and support several business models. In order to achieve this, GlobalPlatform abides by the following guiding principles:

Technology:

- To maintain the stability of specifications, changing them to meet market needs, rather than for technical elegance.
- To preserve backwards compatibility when updating technical specifications.
- To support a security architecture with a range of options to meet different market needs.
- To remain form factor independent and allow implementation on a wide range of devices.
- To develop and maintain compliance tools and a compliance program, allowing the industry to validate product adherence to the organizations specifications.

Communication:

- To deliver an external communications program that reinforces the interoperability and benefits of the GlobalPlatform Specifications, in order to educate stakeholders and drive adoption of the technology.

Membership:

- To engage members within the Advisory Council, task force initiatives and technical committees and to seek their active participation within the development of marketing and technical documents and GlobalPlatform's external communications program.

Technical Overview

GlobalPlatform identifies, develops and publishes technical specifications and market configurations which facilitate the secure and interoperable deployment and management of multiple embedded applications on secure chip technology. Its proven technology is regarded as the international industry standard for building a trusted end-to-end solution which serves multiple actors and supports several business models.

GlobalPlatform applies the term 'secure chip' in reference to embedded technologies used in various chips - such as smart cards, application processors, SD cards, USB tokens and secure elements - for protecting assets (data, keys and applications) from physical or software attacks.

The freely available specifications provide the foundation for market convergence and innovative new cross-sector partnerships. The technology has been adopted globally across finance, mobile/telecom, government, healthcare, retail and transit sectors. GlobalPlatform also supports an open compliance program ecosystem to ensure the long-term interoperability of secure chip technology.

Technical Benefits:

GlobalPlatform offers a interoperable, flexible and future-proof technology foundation for secure chip programs. GlobalPlatform solutions can be sourced competitively from multiple suppliers, ensuring that issuers are not locked into single source commercial relationships. GlobalPlatform cards, devices and systems are interoperable, regardless of technology vendor and the flexibility of the technical infrastructure ensures that it can respond to requirements that are unforeseen at the time of initial deployment. This gives issuers the reassurance that the infrastructure they have chosen will be able to adapt and grow as business conditions change - essentially 'future-proofing' the time and money invested in the development of the program.

IPTV India Forum

IPTV India Forum (IPTV Society) is a non profit non government membership Society, registered with Registrar of Societies, NCR Delhi, which has been set up to advocate, enhance and expand broadband technology's true potential for value addition, so that common citizen of India avail of the advantages of the service in their daily life with ease and affordability.

IPTV India Forum primarily advocate for:

1. Developing an eco system for the delivery of IPTV and Mobile TV
2. Encouraging e-governance, e-commerce and m-commerce
3. Facilitating content development and aggregation networks
4. Providing a platform to discuss and evolve strategies to achieve the shared aspirations of the industry
5. Proving and promoting the effectiveness of IP and Mobile TV.
6. Educating the communities about the core strengths and competencies of the Broadband Wireless Access Technologies.

ITU-APT Foundation of India

Aims and objectives of the society are:

- a) To conduct and co-ordinate research studies on various technical, scientific, regulatory and other related matters, to make contributions to various conferences, meetings, and other activities including technical study groups and associated events of the International Telecommunication Union (ITU) and Asia Pacific Telecommunity (APT) within the framework of the established mechanism and to strengthen active co-operation with ITU and APT with special emphasis on rural development.
- b) To foster international cooperation and to promote telecommunications in association with other countries, especially developing countries, mainly in Asia, and with other national and international bodies as also by getting entrusted with the works by activities such as organising training, seminars, research studies and sharing of information, with particular emphasis on rural development.

- c) To promote, encourage and engage in scientific, educational and research activities which lead to active and meaningful involvement of industry and institutions in the country in the activities of the ITU and APT resulting in healthy growth of industry and infrastructure in the country with emphasis on rural development. This will include formation and guidance to the relevant institutions and to hold meetings for presenting and discussing technical and research papers, and other works of science, technology, regulatory and other allied activities.
- d) To provide, encourage, initiate, collaborate and promote facilities for the discoveries, innovations, research, improvement and development of new methods and technologies including convergence with special emphasis on rural development within the scope of the society.
- e) To undertake research, studies and other activities in cooperation, patronage and coordination of the government, as may be sought and entrusted by the government.
- f) To supplement government efforts and to assist government in organizing meetings, seminars, etc. and to facilitate implementation of government decisions within the scope of the society
- g) To encourage rational formulation of national goals in the context of research, technical and other studies as related to the activities of the ITU and APT.
- h) To hold meetings with the bodies, agencies, persons and others as considered necessary for fulfilling the objectives of the society.
- i) To act as an information center and to collect, maintain, offer, diffuse and provide access to useful knowledge and information for research and studies as related to the ITU and APT texts, documentation, statistics and other related information, including information on technologies and studies in other countries, especially developing countries with special emphasis on rural development.
- j) To spread knowledge, raise awareness and to achieve greater public recognition and understanding regarding studies and other activities of the ITU and APT as also the importance of telecommunications by holding workshops, lectures and seminars and by publishing technical and news journals with greater emphasis on rural development.
- k) To act as a 'Think Tank' on all matters relating to the industry and other institutions in the field of telecommunications including, inter-alia, broadcasting, information technology and space communications, with emphasis on rural development, specially in relation to the activities on the ITU and APT.
- l) To undertake collection and processing data,

statistics, information and knowledge towards scientific developments and promoting awareness in the country as related to the various activities of the ITU and APT.

- m) To form, maintain and manage and to assist in formation, maintenance and management of libraries, educational and scientific institutions and to publish charts, catalogues, directories, periodicals, leaflets, statistics, magazines, journals, books and other publications for dissemination of knowledge and information.
- n) To organize and assist in organizing foreign delegations comprising of members, specialists and entrepreneurs both in India and abroad and to organize and assist in organizing meetings with the foreign teams as also with the international, regional and other organizations within the scope of and to fulfill the objectives of the society.
- o) To organize visits at bilateral, multilateral, regional and international levels, exchange visits of experts and personnel and holding of technical exhibitions, presentations, seminars, conferences, undertake joint studies and research work within the scope of the society.
- p) To act as a bridge between the industry and other institutions on the one hand and the government and other regulatory agencies on the other, within the scope of the society.
- q) To co-ordinate, harmonize and formulate expert opinion on topical subjects within the scope of the society.
- r) To co-ordinate, harmonize and formulate views and proposals of industry and other institutions within the jurisdiction and scope of the society, especially in the context of various activities of ITU and APT, as also in the national context, for instance on matter related to radiocommunications, spectrum management, radio regulations, telecommunication standardization, telecommunication development and basic instruments of these bodies, to project their views and proposals to the appropriate fora through established mechanisms and practices and to assist government in forming, projecting and negotiating for protecting national interest and national security.
- s) To subscribe and to become member of and / or to co-operate with national, international and regional organizations and associations to fulfill the objectives of the society.
- t) To raise and receive funds, grants, donations, subsidies, sponsorships, contributions from governments, private, autonomous, professional, scientific companies, associations, institutions bodies or individuals or any regional and international bodies and agencies for fulfilling the aims and objectives and for creating immovable, movable and current

CO-SPONSORS

assets for the society for operations and various programs and activities of the society.

u) To participate in various meetings, conferences, seminars and other activities of the ITU and the APT and other related bodies, agencies and fora within the scope of the society and in accordance with the established mechanism.

v) To undertake any other activity within the scope of the society and for fulfilling the aims and objectives of the society.

Smart Card Alliance

The Smart Card Alliance is a not-for-profit, multi-industry association working to stimulate the understanding, adoption, use and widespread application of smart card technology. The Alliance invests heavily in education on the appropriate uses of technology for identification, payment and other applications and strongly advocates the use of smart card technology in a way that protects privacy and enhances data security and integrity. Through specific projects such as education programs, market research, advocacy, industry relations and open forums, the Alliance keeps its members connected to industry leaders and innovative thought. The Alliance is the single industry voice for smart card technology, leading industry discussion on the impact and value of smart cards in the U.S. and Latin America.

Smart Card Federation of China

Smart Card Federation of China - SCFC is a major non-profit trade society representing companies in the smart card & RFID industry. The main objectives are:

- to serve as an open forum for industry news, communications and networking;
- to monitor and report on the development of new industry technologies, products and services;
- to act as the independent voice for companies involved in the smart card RFID industry.

With the SCFC's educational programmes at regional meetings, conferences and its annual International Conference and Exhibition on Smart Card & Smart Label-SCSL, monthly magazine -Cards Tech and Security- in Chinese and English newsletters (SCFC New Shop), you will constantly be updated on issues facing the industry. In addition to its overall focus, SCFC recognises the needs of specific niches within the industry.

Cards Tech & Security (CTS) launched in 2000, is a monthly bilingual magazine (ISSN1607-9833) in Chinese and English (including four issues in full English Version), which is disseminated to the top corporations and government buyers in Asia and China. CTS is dedicated to exploring the international market and enhancing the exchanges and cooperation for both the global and local Chinese card vendors in the fields of smart card and RFID technologies, applications and security topics. CTS has gained the recognition from both the local and international circles of the industry.

Telecom Equipment Manufacturers' Association - TEMA

Established in 1990, Telecom Equipment Manufacturers' Association of India (TEMA) is recognized by the Government of India as the National Apex body to represent telecom Technology Providers, Global and Indian, Private and Government owned companies.

Being the official mouthpiece of Indian telecom manufacturing industry, TEMA plays the critical role of advising the government and influencing decisions relating to Indian telecom industry. TEMA also enjoys the privilege of proposing names of technical experts from the industry to various telecom committees of the Government of India and major national industry associations.

Exclusive services offered to TEMA members include, interaction with Government, Policy makers, interaction with various National Confederations of Industries, overseas Delegations, Exhibition Organizers, Market Development Assistance Authorities, Tender Information, Excise and Customs Departments, Telecom Engineering Center for product specifications etc. Our members are exporting a variety of Telecom Equipments to South America, Middle-East, Africa, SAARC, CIS and South East Asian Countries.

TEMA Export Exportr Promotion Forum

TEMA Export Promotion Forum was set up by the Ministry of Commerce, Government of India to promote Export of Telecom Equipments and Services. With the formation of the Forum, it can undertake several activities aimed at export promotion such as Commissioning of Studies to find potential markets, holding of National/International Seminars and facilitating participation of exporters in various overseas exhibitions. The forum would also be able to disseminate trade related data to its members. The Forum also makes recommendations to the Government for making necessary changes in various policies and procedures for promotion of Exports and Services.

Telecom Users Group of India (TUGI)

The Telecom Users Group of India is a membership organization of communications users. TUGI is a non-profit, non-government organization, set up in 1997 as a registered society to take up concerns / complaints and also to influence the policy makers. A different activity of TUGI includes providing a forum for discussion on use of various communications facilities/services, which are available, in the country.

The use of these advance communication services are ideal for development for policies, equipment standards and regulation to, keep a close liaison with the Government and semi government bodies and supporting research in rural telecommunication, education and health services. It is been generally noted that The India Telecom Users have been periodically paying higher charges with no improvement in quality of services. There is also a hindrance in free flow of network interconnection.

With the continued advancement in communication technology and with the rapid growth of voice and data services - the need arose for the national and International Communications Users Organization to collaborate more effectively in order to influence regulations, standards, tariffs and to promote freedom for the customer in regard to choice of equipment and services.

TUGI is registered with Telecom Regulatory Authority of India (TRAI) and a member of CAG (Consumer Advocacy Group) set up by the TRAI and works closely with International Telecom Users Group (INTUG) and other regional users group like TUANZ and ATUG.

Day One, October 17, 2013

International Conference on Smart Card Manufacturing in India - Prospects and Challenges

Pragati Maidan, New Delhi

TENTATIVE PROGRAMME

09.00-10.00 hrs. Registration

10.00 -11.30 INAUGURAL SESSION

10.00-10.10 Introduction; S.Swarn, CEO & Editor-in-Chief, Electronics Today

10.10-10.30 Welcome : Mr. V.M. Gandhi, M-TECH Innovations Ltd.;
Smart Card Manufacturing in India - Prospects and Challenges

10.30-10.50 Inaugural Address: Mr. J. Satyanarayana, Secretary, Department of Electronics
and Information Technology, Government of India

10.50-11.10 Keynote : Mr. P. K. Mohanty, Joint Secretary, Tax Research Unit,
Ministry of Finance, Govt. of India

11.10-11.20 Discussion

11.20-11.50 Tea/Coffee Break

12.20-13.20 Session - II

Chair : S. K. Marwah, Director, Department of Electronics and
Information Technology, Govt. of India

12.20-12.35 Chairman's Remarks and Presentation
Vandana Srivastava, Scientist "E", Department of Electronics and Information Technology,
Govt. of India; Modified Special Incentive Package Scheme, for Promoting
Smart Card Manufacturing

12.35-12.50 Mr. George Mathew, Smart Card IT Solutions Ltd; Indian Smart Card Manufacturing
Scenario and Future Road Map

12.50-13.05 Sanjeev Mathur, President, Sharon Solutions; Global Smart Card Manufacturing Scenario

13.05-13.20 Discussion

13.20-14.30 Lunch Break

14.30-16.00 Session - III

14.30-14.40 Chair : Mr. George Mathew, Smart Card IT Solutions Ltd

14.40-15.00 Mr. Sanjay Dharwadkar, Smart Card Expert, Africa;
India - The Smart Card Industry Power House

15.00-15.20 Mr. Manuel Villamayor, NagraID Corp, Switzerland ; eID solution for India

15.20-15.40 Mr. M. S. Bhagwat, Technical Director, M-TECH Innovations Ltd;
Card Manufacturing Processes

15.40-16.00 Jack Gijrath, Director Business Development, APAC Region, NXP;
Silicon Hardware and Software Trends in Smart Card Manufacturing Environment -
Global and Indian Perspective

16.00-16.30 Tea / Coffee

16.30 Close of Conference

Day Two, October 18, 2013 **International Conference on** **Multiapplications on ID Card - Opportunities and Challenges**

Pragati Maidan, New Delhi

TENTATIVE PROGRAMME

09.00-10.00 hrs. Registration

- 10.00 -11.30 INAUGURAL SESSION
- 10.00-10.10 Welcome & Introduction; S. Swarn, CEO & Editor-in-Chief, Electronics Today
- 10.10-10.30 Inaugural Address: Mr. Anil Swarup, Additional Secretary, Cabinet Secretariat, New Delhi
- 10.30-10.50 Mr. Rajat Moona, Director, CDAC; Technology; Challenges in a Multiapplication Environment
- 10.50-11.10 Mr. Pavan Duggal, Advocate, Supreme Court of India and Authority on Cyber Law; Legal Framework for Deployment of Multiapplication ID Card
- 11.10-11.20 Discussion
- 11.20-11.50 Tea/Coffee Break

11.50-13.00 Session-II

- Chair: Dr. Mahesh Chandra, Dy Director General, National Informatics Centre (NIC), New Delhi
- 11.50-12.10 Chairman's Remarks and Presentation - Multiapplication Smart Card for Transport Sector
- 12.10-12.30 Keynote: Mr. S. K. Sinha, Sr. Technical Director and Head, Digital Certifying Authority, Smart Card Technology, NIC; Multi Application Smart Card - Challenges and Possibilities
- 12.30-12.50 Rajesh Vaish, Consultant, IT & Payment Systems Multiapplication ID Card for Digital Age - Ensuring Security and Privacy
- 12.50-13.10 Ajesh Kapoor, NXP, Secure Multiapplication ID Card in Rapidly Growing e-Governance Ecosystems.
- 13.10-13.30 Vishal Zindal, Virgo Softech Ltd.; Smart Card Based Public Distribution System
- 13.30-13.40 Discussion
- 13.40-14.30 Lunch Break

14.30-16.00 Session-III

- Chair: S. K. Sinha, Sr. Technical Director, NIC
- 14.30-14.40 B. K. Wadhawan, Sales Director, Security Business Unit, India, Bangladesh, Srilanka; Gemalto; Enhance Opportunities With Dynamic Multiapplication ID Scheme;
- 14.40-15.00 Y. D. Wadaskar, Managing Director - Wyse Biometrics Systems P Ltd.; Managing Human Resources on the Basis of National ID
- 15.00-15.20 Philippe Blot, CEO, UNIT France, Tackle New Opportunities, adding Biometric Sensors on Card
- 15.20-15.40 Tino Risse, Otto Kunneke, Germany Secure Verification, Sorting and Packaging of ID Documents
- 15.40-16.00 Manual Villamayor, Nagra ID, Switzerland Multipurpose e-ID Solutions for India
- 16.00-16.30 PANEL DISCUSSIONS
- 16.30-16.40 Tea/Coffee
- 17.00 Close of Conference

Company profile

AdvanIDe - Advanced ID Electronics - is one of the leading silicon distributors, focused on components for RFID transponders, chip cards and RFID readers and terminals in Identification business segment. Thanks to its optimised semiconductor supply chain, AdvanIDe can guarantee manufacturers of Smart Cards, RFID Transponders and readers, the most efficient access to the latest semiconductors. The product range, offered by AdvanIDe, includes bare silicon chips, smart cards IC modules and RFID reader ICs from leading suppliers like ATMEL, EM Microelectronic, Infineon, LEGIC, Microchip, NXP Semiconductors, ST Microelectronics and Texas Instruments. The service range from design-in support for new IC technologies and derivatives, logistical and fulfilment functions as well as after sales support to the marketing of overstocks, excess or obsolete stocks.

AdvanIDe is an ASSA ABLOY Group brand.

Centre for Development of Advanced Computing (C-DAC) is the premier R&D organization of the Department of Electronics and Information Technology (DEITY), Ministry of Communications & Information Technology (MCIT) for carrying out R&D in IT, Electronics and associated areas. Different areas of C-DAC, had originated at different times, many of which came out as a result of identification of opportunities.

The setting up of C-DAC in 1988 itself was to built Supercomputers in context of denial of import of Supercomputers by USA. Since then C-DAC has been undertaking building of multiple generations of Supercomputer starting from PARAM with 1 GF in 1988.

Research and Development at C-DAC

The Primary activity in all centres of C-DAC is research and development in specific areas of information and communication technology and electronics (ICTE). Across all these centres, we span a wide range of topics in ICTE. Broadly, we can divide the R&D activities into two broad classes: the enabling technologies and application verticals. The research activities are usually driven by specific application areas, and hence mostly applied in nature.

Based on the vision charted by the parent ministry (MCIT), international trends, Indian requirements, etc. CDAC identifies significant thrust areas for focus across the various centres. The thrust areas, at present, are:

- High Performance Computing including the Param series of computers, Garuda national grid initiative, development of scientific computing applications on these platforms, and cloud computing.
- Multi-lingual Computing spanning the entire range from fonts and encoding to speech and language translation, which includes fonts for Indian languages, encoding standards, information extraction and retrieval, machine aided translation, speech recognition and synthesis, etc.
- Professional Electronics covering electronic devices and embedded systems. This area covers work such as underwater electronics, software radio, ubiquitous computing.
- Information and Cyber Security including intrusion detection and prevention, malware analysis, cyber forensics, network security, etc.

- Health Informatics including hospital information systems, electronic medical records, telemedicine, and cancer networks.
- Software Technologies including e-governance solutions, e-learning technologies, geomatics, open source software, accessibility, etc.
- E-Governance & M-Governance

C-DAC has today emerged as a premier third party R&D organization in IT&E (Information Technologies and Electronics) in the country working on strengthening national technological capabilities in the context of global developments in the field and responding to change in the market need in selected foundation areas. In that process, C-DAC represents a unique facet working in close junction with DIT to realize nation's policy and pragmatic interventions and initiatives in Information Technology. As an institution for high-end Research and Development (R&D), C-DAC has been at the forefront of the Information Technology (IT) revolution, constantly building capacities in emerging/enabling technologies and innovating and leveraging its expertise, caliber, skill sets to develop and deploy IT products and solutions for different sectors of the economy, as per the mandate of its parent, the Department of Information Technology, Ministry of Communications and Information Technology, Government of India and other stakeholders including funding agencies, collaborators, users and the market-place.

Company profile

Innovation being our watchword, we like to explore the unseen, invent the undiscovered and deliver the best. M-Tech Innovations Ltd., (formerly Mahavir Decorative Products Pvt. Ltd.) is an ISO - VISA - MASTERCARD - RUPAY - EMV certified organization specializing in engineering plastics printing.

From a very modest beginning in 1987, today M-Tech is one of the leading organizations in the manufacture of high tech products for the banking, telecom, mass transit, automobile, electronics, appliances & dental healthcare industry. M-Tech's team of professional and experienced engineers constantly meets the challenges of quality and client care by establishing personal and professional relationships with each of our customers. A well honed Quality Policy Management System is designed to meet our customer's

satisfaction while quick responsiveness is the key to our success.

At M-Tech, product development and innovation has been an ongoing process. Starting with the manufacture of labels, dials and stickers for the consumer electronics industry in 1992, it diversified into manufacturing of tactile and membrane switches. The ultra-modern card manufacturing facilities was installed in 1997 for security cards and today we are able to offer smartcards, readers and card based applications. Some of the high precision products include flexible speaker grills, in-mould decorated components and pre-paid telephone cards. In keeping with general awareness on health, M-tech has launched its Health Care Division in 2004.

People, technology and our production capability have all been key elements in gaining market leadership. M-Tech has been recipients of several national and international awards like TATA - Honeywell Award, the G. S. Parkhe Award and the Golden Image Award for product innovation and quality systems. An ISO 9001:2008 certification in 2011. Our Management received special appreciation for its systems approach and a quality management system to accomplish growth on a continuing basis.

Today M-Tech has an impressive list of multi-national clients who prefer vendors competitive in quality price and delivery. These include Government departments, Banks and leading multinationals.

HX-UV6000 Barcode Printing Machine

Company profile

Shenzhen Finesun Precision Machinery & Technology Co., Ltd. Was established in 2000, which specialises in developing and manufacturing of making automatic equipments, it has got splen

achievements in the industry in terms of automatic card punching and automatic card packaging. It inherits the operating philosophy of credit-standing to improve the intelligentisation, automatisisation and high speed of card making equipments. The company continuously makes innovation and improvement on its operation and management, adheres to the principle of honesty first and service forever. Its products are highly recognised by overseas and domestic customers for the good quality and reasonable price.

In 2006 and 2007 the company was awarded "most popular equipment supplier" in China smart card industry suppliers competition.

Products is intelligentisation, Automaticmatisation and high speed

The products adopt the imported PLC program control with function of automatic location, production, alarming and error revising. It is easy to operate with high degree of automaticmatization. The movement devices system adopts hydraulic cylinder, air cylinder, servomotor, stepping motor with advantage of stable running, high speed and efficiency.

Customisation

The company has its own technical R&D team; it can design the products according to the customer's requirements. (Such as special model needed by individual products, adding special functions to machine)

Perfect products series

The company produces a large range of machies including printing, laminating, punching, spray code printing, code embossing, labelling and packaging machines, as well as the fully-automatic, semi-automatic and manual production lines of contact card/non-contact cards, and the leading electronic tag series equipments.

Company profile

STMicroelectronics Activities in India

Starting with just four employees in 1987,

STMicroelectronics' operations in India have come long way, evolving into an organization with approximately 1600 employees. Among the pioneering visionaries of the industry, ST was one of the very first microelectronics companies to recognise India's potential and, by 1990, had begun its design operations in the country. Coupling a rich pool of talent with a well-focused strategy, ST's advanced R&D centres at Greater Noida and Bangalore are contributing significantly to almost all key application segments of the Company. Greater Noida is ST's largest design centre outside Europe.

Research & Development Activities in India

The range of R&D activities carried out by ST in India reflects the multi-faceted nature of ST's cutting-edge technologies and the exceptional ability of India's engineers to create industry-leading solutions. In product design, engineering achievements in India include the development and industrialisation of high value platforms, SoCs (Systems on Chip), embedded systems, application-specific IP (Intellectual Property), and reference designs in various application segments, including home entertainment, multimedia, telecommunications, imaging, automotive, computer peripherals, and industrial control. ST designers in India have developed embedded solutions for a wide variety of applications, including Set-Top-Box, Wireless, Digital TV and Multimedia.

As an example, ST's design centre in India has developed and implemented both the chip and software for the STi5197, ST's latest MPEG decoder for standard-definition, low-cost set-top box applications, which has become a successful global product for the Company. ST India has also been a major contributor to the development of the award-winning Nomadik™ chip family (now part of the ST-Ericsson portfolio) of application processors for portable mobile devices. In Integrated TV, ST Bangalore has been the epicenter of the SoC and software design and implementation for the Company's latest 3D iDTV product family (Freeman), targeting worldwide TV solutions.

India also plays a key role in the Company's technology R&D activities. ST's engineers in India have made a substantial contribution to the development of the Company's leading-edge low-power 45nm design platform. ST designers in India have developed libraries for 32nm and are now working to develop 28nm and 20nm design platforms for future-generation products.

ST's design teams in India specialize in VLSI design, embedded software development, application engineering, and the company's Information Systems. The ST India Advance System Technology Group is developing advanced video-coding algorithms. ST's Automotive Product Group in India has contributed to the design and integration of the Cartesio navigation devices and the EyeQ automotive security and safety processors. Other ST products and technologies to which ST India's engineers have made significant contributions include the SPEAr embedded microprocessors, image-signal processing chips for mobile phone cameras, and non-volatile and power silicon technologies.

Demonstrating its strength in generating valuable IP, ST in India has filed close to 425 original patents applications to date, of which around 243 have currently been granted.

Last but not least, India is a major hub providing and supporting the Company's worldwide IT applications, such as Business, Financial, and HR systems. This arm of ST is also certified to CMM (Capability Maturity Model) Level 5, the worldwide standard for assessing and improving software processes.

The R&D Facilities

Committed to expanding its strong presence in the country, the Company built a state-of-the-art R&D campus on an area of 100,000 square meters at Knowledge Park 3 in Greater Noida, Uttar Pradesh, in 2006, with a capacity for more than 2,000 engineers and support staff.

To take full advantage of the fast growing development of the country, ST established a design team of around 50 engineers in Bangalore in 2004.

Marketing Approach

In addition to its leading-edge design and software development activities, ST Marketing teams at the Greater Noida and Bangalore sites, along with teams in the Mumbai and Pune offices, support the growing base of India-based electronic manufacturers that use ST products. The ST Marketing team in India is actively engaged in addressing the requirements of domestic customers (OEM and distribution), transnational and electronic manufacturing services (EMS) customers in various market segments such as automotive, industrial, digital consumer and smart cards.

ST India application excellence teams have created multiple reference designs for set-top boxes, Energy

Meters, Smart Grid, Lighting, Integrated and 3DTV, and Power ICs, just to name a few. ST's engineers have been instrumental in supporting ST's technology partners that have set up operations in India. The Company has also established a strong distribution network to service and support international and domestic customers operating in the country.

Sustainable Excellence

ST has used its longstanding experience to establish deep relationships with leading Indian universities and research institutions. For example, since 1999 ST has been operating a joint laboratory in Bangalore with the Indian Institute of Science (IISc), one of the premier academic and technical institutions in India. ST has further extended its joint labs to two other highly reputable institutes, Indian Institute of Technology (IIT) Delhi and BITS Pilani, to carry out advanced research. Additionally, ST has been providing industrial experience to students by offering on-site trainings and by inviting the faculty for enhancing Industry-Academia relationships.

The Company is firmly committed at the worldwide level to the principle of Sustainable Excellence - creating value for all stakeholders to ensure the long-term success of the company and its contribution to global sustainable development. Within this context, special care and attention is dedicated to environmental protection and bridging the "Digital Divide" - the huge imbalance between those who have access to Information Technology and are therefore able to benefit from it and those that do not have such access.

The STMicroelectronics Foundation has set up eleven computer training centers in partnership with schools and NGOs across India within its Digital Unify initiative. A tight-knit group of ST volunteers trains computer teachers for the centers, as well as organizes internal programs at ST Noida to provide employees and their relatives with training and access to Information and Communication Technologies. Over 4,500 people have received computer education in India since the Digital Unify initiative started in 2003.

ST in India has been included in the "Best Employer" and "Great Places to Work" category by local research groups in the years 2002, 2003, 2004, and 2008. It is a recipient of the prestigious IMPRESA award from the European Bi-lateral Chambers of Commerce & Industry in India for 'Innovation' and 'Bringing European Best Practices to the country'.

The local sites are certified with the best-in-class global standards like ISO TS 16949 for its quality management system, OHSAS 18001 for Occupational health and safety and ISO 27001 for information security management. ST Greater Noida places a special focus on employee health, providing the industry-benchmark insurance policies that cover both employees and their parents.

The culture and policies that have led to these recognitions have contributed to the India sites' success in attracting and retaining young, talented engineers. The average age of employees is around 30 years. ST has been, and remains, committed to providing a stimulating working environment with exciting opportunities for Indian engineers to develop their careers.

Seamlessly integrated into ST's global R&D (Research and Development) organisation and design activities, ST's R&D operations in India combine the power of an advanced worldwide communications network and the discipline of a global service-oriented corporate culture with the skill and enthusiasm of the Indian scientific and engineering community.

Mr. Harry Post — CEO

Company profile

VTT Germany is the leading manufacturer of lamination plates for the production of governmental security documents (e.g. passports, ID-cards, driving licences). Special surfaces with raised or inlaying security features (MLI-/CLI-lenses, microlettering, guilloche patterns etc.) let the documents become forgery-proof.

VTT Fly Eye Technology is the latest VTT invention for all card materials without investment in machines and facilities. The idea of this new technology with hexagonal lenses is to design the structure of a fly eye in the nature. This technology allows to make full-size and partial images.

VTT high tech lamination plates are the perfect choice for the card manufacturing industry.

Company profile

WYSE Biometrics Systems Pvt. Ltd. is an ISO 9001:2008 & ISO 14001:2004 certified company for design and manufacturing of electronic authentication devices.

WYSE is a leading Indian Electronic Identity Management Enterprise that caters primarily to the security needs of the Information Technology (IT) sector.

The company commenced operations at Pune, India in 1993 with the designing and manufacturing of niche electronic authentication devices and custom made electronics products.

One of the first security products the company launched was Sentry, a hardware lock par excellence. Enthused by its success, the company forayed into the challenging field of biometrics to develop a range of software protection devices for different applications. The current range of Wyse's Security products includes Internet Authentication System, Fingerprint Authentication System, Smart Card Authentication System, PC Logon system and Digital Certificate Storage.

WYSE possesses excellent system level programming skills such as development of their own device drivers, application specific functions like DLLs and Internet based Objects and Controls.

While supporting the products and customers over last decade, WYSE has earned reputation of delivering the reliable products and top-notch service to the clients.

With an in-depth knowledge of information security, cryptography and biometrics, WYSE is fully geared to be your outsourcing partner in India for all your biometric security needs.

Company profile

Zenith Weaving Strings Pvt. Ltd. Established in 2011 is located in the famous manufacturing base Sahibabad Industrial Area, Ghaziabad, Delhi-NCR INDIA. We specialize in a variety of Lanyards, Shoelaces, Cell Phone Holders, Luggage Belts, Key Chains, Fashion Belts, Camera belt, Pet Leashes, Accessories, Normal Straps, Computer Jacquard Straps, Normal Elastic Straps, Jacquard Elastic Straps, Bracelets and other straps extending products. Entitled to handling export and import, INDIA and South Asia is our main markets.

In 2008, we purchased the land of 250 square meters to have our self-built modern standard workshop with more than 1000 square meters. After 15 years' efforts through 2 generations, we became one of the largest lanyards manufacturers in India. We have our own weaving, embroidering, silk-printing, heat-transferring and assembly department. All manufacturing processes are done on site at our own factory, allowing us to better control the quality at every stage, therefore to guarantee our overall production efficiency.

We have state-of-art production units equipped with modern machinery to take care of large scale production. The workforce is dedicated to provide awesome results within the stipulated time. We have been successful in maintaining the Quality of our products, offering competent pricing and focusing on timely delivery and innovation. The company produces a wide range of woven and rigid narrow fabrics in width varying from 6mm to 35mm, plain and with jacquard, in any weave, color combination or raw material with any design. Zenith Weaving String Pvt. Ltd. can customize the products in any manner as per the requirement given by the buyer. We have the capacity of manufacturing 10- 20 lakhs of meters of narrow woven tapes per month.

With our customer-oriented practices, we will keep innovating and improving our management system and continuously strive to provide you with the highest quality at the lowest prices.

India's only Monthly Journal on Smart Card, e-Security, RFID, Biometrics, e-Payments Technology and Applications

Government expands PDS Smart Card across India

After the success of its pilot smart card PDS projects in Haryana and Chandigarh, the Central government is planning to expand it to other states to eliminate duplicate and bogus ration cards.

The pilot
The ration card data is first digitised and then field camps are organised to capture finger prints and photographs of card members. Different colour schemes identify BPL, APL or AAY categories. Entitlement and quantity drawn by the beneficiary during each transaction are also written on the card.

to the FPS, sale policy and price, stock and transaction details to know the stock balances at any point of time.

The point of sale (POS) terminal has dual smart card readers one for FPS dealer card and other for beneficiary card and a printer to print the receipts.

Bogus ration cards are causing a big problem in efficient distribution of subsidised foodgrains

been widely reported from different parts of the country.

Seeing the success of the pilot project, the government is planning to roll out the smart card project in four other states by the end of the year.

With an aim to make the payment system more efficient and secure, the government is planning to roll out the smart card project in four other states by the end of the year.

Fishermen in India to get smart biometric identity cards

Officials can soon monitor the real-time location of fishing vessels on a digitised map of the country's seaboard. They can pre-empt Indian fishermen from straying into foreign waters by sending them flash messages on mobile or wireless, coordinate sea rescue missions better, and ensure that vessels return to harbours with their crew intact and no outsiders or contraband on board.

The system can generate status reports to prove the genuineness of Indian fishermen if they are detained by foreign authorities. This would ensure their speedy release.

Duplication of engine numbers and boat

RBI 'vision' to promote electronic payments for 'less-cash' economy

The Reserve Bank of India (RBI) has released a document titled 'Vision Document 2012-15' seeking public comments. The document envisages ways and means of ensuring that the payment and settlement systems in the country are safe, efficient, interoperable, authorised, accessible, inclusive and compliant with international standards.

With an aim to make the payment system more efficient and secure, the government is planning to roll out the smart card project in four other states by the end of the year.

payment systems to all. RBI notes that one of the biggest challenges towards a less-cash society is that deposit-based cash is a deep-rooted habit in India.

The government mandate to promote electronic payments is a deep-rooted habit in India.

including mobile payments. It has suggested that the government should mandate the use of electronic payments.
