

Learn to secure your online communication and have a Cryptoparty!

Bangalore, Sunday 30th June, 4pm: <http://cis-india.org>

"Governments around the world, are greatly increasing their surveillance of the Internet. Alongside a loss of the private sphere, this also represents a clear danger to basic civil liberties. The good news is that we already have the solution: encrypting communications makes it very hard, if not entirely impossible, for others to eavesdrop on our conversations. The bad news is that crypto is largely ignored by the general public, partly because they don't know about it, and partly because even if they do, it seems too much trouble to implement."

So lets go and have a party, and teach each other how to crypto!

Everyone is invited! Especially do not hesitate to join if you are not using any crypto at all (yet!)
